SUMMARY

Computer Science undergraduate specializing in Machine Learning engineering, scalable backend architectures, and production-grade LLM system integration. Adept at architecting end-to-end data pipelines, designing automation microservices, and leading peer technical mentorship initiatives with quantified performance outcomes

EXPERIENCE

AI Builder

Alta School of Technology

- 📅 2026 - Present
- Architected 3+ production AI systems leveraging LLMs, prompt engineering, and RAG pipelines to optimize educational content generation frameworks
- Coached 22+ engineering students in fine-tuning strategies and conversational engine logic, accelerating team project deployment velocities

Python Developer Intern

Axcentra Technologies

- 📅 05/2026 - 06/2026
- Engineered custom data processing automation modules, successfully minimizing manual task execution overhead by 40%
- Streamlined REST API integrations and data transport infrastructure, boosting processing throughput times by 25%

AI/ML Intern

IETE Hyderabad

- 📅 05/2025 - 06/2025
- Formulated predictive regression frameworks for customer churn analysis and pricing indices, elevating classification modeling accuracy to 94%
- Evaluated a complex corporate dataset of 50,000+ data instances using Matplotlib to construct operational analytics dashboard views

EDUCATION

BTech in Computer Science & Engineering (AI & ML)

Anil Neerukonda Institute of Technology & Sciences

📅 2024 - 2027 📍 Visakhapatnam, AP

CGPA

8.39 / 10.00

Diploma in Computer Science & Engineering

Behara Technical Campus

📅 2021 - 2024 📍 Visakhapatnam, AP

CGPA

9.10 / 10.00

SKILLS

Machine Learning & Core AI

LLM Fine-Tuning

Retrieval-Augmented Generation (RAG)

Natural Language Processing (NLP)

Scikit-Learn

Predictive Modeling

Exploratory Data Analysis (EDA)

Software Engineering & Infrastructure

Python

Java

JavaScript

Node.js

Express.js

Flask

RESTful APIs

MongoDB

AWS EC2

Git

Data Structures & Algorithms (DSA)

Computer Networks

PROJECTS

DSA AI Chatbot

Python, NLP, MongoDB

- Engineered an interactive AI debugging platform proficiently indexing and explaining 50+ unique Data Structures & Algorithms solutions
- Designed a decoupled backend architecture sustaining 90%+ diagnostic intent classification while managing secure chat logs for 100+ parallel users

Auto Faculty Assigner

Flask, n8n, APIs

- Devised an algorithmic resource assignment scheduler via automated n8n workflows, slashing standard task times from 5 hours/week down to under 10 minutes
- Mitigated 100% of multi-variable schedule overlap conflicts through constraint-satisfaction logic layers, yielding a 96% administrative efficiency improvement

KEY ACHIEVEMENTS

NASA International Space Apps Challenge

Ranked Top 20 out of 80 competing technical teams for engineering a live, Flask-backed macro-climate visualization engine

GDG Build & Blog Marathon

Secured a Top 10 finish out of 400+ entries by containerizing and deploying an optimized artificial intelligence application onto Google Cloud Run
